

Andrea Valla

Staff-level Product Engineer | Full-Stack, Architecture & AI Systems

Turin, Italy +39 335 82 30 421 valla.andrea@gmail.com avalla.github.io LinkedIn GitHub

Professional summary

Staff-level product and full-stack engineer with 20+ years of experience designing, building, and operating software systems end to end. Strong background in TypeScript, React, Node.js, PostgreSQL, GraphQL, integrations, data platforms, infrastructure, and AI-enabled products.

Former CTO and co-founder who turns ambiguous product and technical problems into simple architectures and production systems. Comfortable working across discovery, system design, implementation, deployment, operations, data, and customer-facing concerns, with a bias for explicit boundaries, reusable abstractions, and accountable decisions.

Professional experience

Solution Architect, Full-Stack Developer & System Administrator

Feb 2022 - Present

BrandsDistribution.com · Turin, Italy

Own architecture and delivery across ecommerce integrations, AI product work, analytics, and new product development, from discovery through deployment and production operations.

Built queue-backed BDroppy integrations with Shopify, Squarespace, Wix, and EKM supporting 50,000+ external stores; shipped apps through the Shopify and Wix app marketplaces.

Architected Aidify, an AI-powered chatbot platform integrated with ecommerce channels through staging and production.

Delivered a BI platform using BigQuery, Airbyte, Cube.js, and Looker Studio to support cost and ROI analysis.

Designed and built AutoEpoque, a classic-car marketplace for classifieds and auctions, across the React/TypeScript product, PostgreSQL security model, background jobs, integrations, and database tests.

TypeScript · React · Node.js · Bun · PostgreSQL · Supabase · Redis · BigQuery · GraphQL

CTO & Co-founder

Mar 2018 - Jan 2022

Agile Factory · Turin, Italy

Took a real-time manufacturing execution system for SMEs from product concept and technical strategy through architecture, implementation, customer deployment, and operations.

Designed the integration architecture between industrial equipment, OPC UA/MQTT data flows, and customer ERP systems using ETL pipelines.

Built the product as two React applications backed by Node.js services and GraphQL, with Redis, Docker, automated tests, and code-quality tooling supporting delivery.

Node.js · React · GraphQL · Redis · Docker · OPC UA · MQTT

Full-Stack Developer

Jun 2015 - Mar 2018

Industrial Cloud, Politecnico di Torino spin-off · Turin, Italy

Delivered manufacturing web applications from analysis and product requirements through implementation, customer deployment, and ongoing updates.

Node.js · React · Elasticsearch · MySQL · PHP

Selected systems

AI Office

2026 - Present

Creator

Created a local-first AI software office that coordinates agents, tasks, runs, and governance through a daemon-backed CLI, with SQLite as authoritative state.

Separated domain, application, and infrastructure concerns so runtime, persistence, LLM providers, and connectors remain replaceable behind explicit ports.

Designed deny-by-default capabilities and controlled actions with simulation, approval, fresh authorization, audit events, usage metering, cost accounting, and budgets.

TypeScript · Bun · SQLite · OpenAI · Codex · Claude Code

AutoEpoque

2025 - Present

Product architecture & engineering at BrandsDistribution

Own end-to-end architecture and implementation for a classic-car marketplace supporting classifieds and auctions.

Built a React/TypeScript monorepo on Supabase/PostgreSQL with row-level security, BullMQ/Redis jobs, media workflows, internationalization, and pgTAP database and security tests.

TypeScript · React · PostgreSQL · Supabase · Redis · BullMQ · pgTAP

Earlier experience

Full-Stack Developer

Sep 2010 - Jun 2015

Intesa Sanpaolo · Moncalieri, Italy

Built business applications, ETL/data workflows, and reporting systems in the Microsoft ecosystem, spanning SQL Server, SSIS/SSRS, .NET, and JavaScript.

Developer & System Administrator

Sep 2003 - Sep 2010

Reply S.p.A. · Turin, Italy

Worked across software development and system administration in Linux, Unix, and Microsoft environments, including constrained enterprise infrastructure and production-risk containment.

Unix System Administrator

Jul 2002 - Jul 2003

Global Value Services · Turin, Italy

Managed systems and applications supporting FCA web properties in HP-UX environments.

Core technologies

Languages & backend

Architecture & infrastructure

TypeScript, JavaScript, Node.js, Bun, Deno, GraphQL, Express, C#/.NET, PHP

Linux/Unix, Docker, GitHub Actions, AWS, GCP, Azure, Cloudflare, queues/background jobs, APIs & third-party integrations, CI/CD

Frontend

AI / LLM

React, React Native, Apollo, URQL, Redux, Vite, Tailwind CSS

agent systems, OpenAI APIs, LangChain, LLM gateways, usage/cost metering, capability-controlled tools

Data & BI

PostgreSQL, Supabase, Redis, MongoDB, BigQuery, SQL Server, MySQL, Airbyte, Cube.js

Languages

Italian Native · English Fluent · German Basic
